

# **Report on Quality of Hydrogen from H70 Nozzles of CSU LA H<sub>2</sub> Station on November 12, 2014**

By Jong Pyng Hsu, PhD

[www.SmartChemistry.com](http://www.SmartChemistry.com)

## **Executive Summary**

All the non-hydrogen constituents are below the limits listed in “TABLE 1 - HYDROGEN FUEL QUALITY SPECIFICATION of SAE J2719”.

### Table of Contents

<b>Hydrogen Fuel Index</b>	The hydrogen fuel index is the value obtained when the amount of aggregate impurities, as, expressed as percent (μmole/μmole), is subtracted from 100%. (Section 3.5 of SAE J2719)		<b>99.9971%</b>		

Table I      Particulate Filter, Size and Concentration - ASTM D7651-10

This is 0.2 $\mu\text{m}$  Teflon particulate filter after ASTM D7650-10 particulate sampling at H70 nozzle of CSU LA hydrogen fueling station without any flow regulation. The particulate concentration of the sample from H70, 14CSU007-01, is 0.11 mg/kg, in which an amount of 0.218 mg particulates is found in 2.0 kilogram H<sub>2</sub> with average sampling flow rate 67g per second. The Teflon filter shows no pinhole damage after particulate sampling. Sizes and images of Particulates are shown in Table II & III.

## Table II Particulate Concentration Calculation Sheet

### Weight of Particulates Collected on Teflon Filter

Date	WMF (Weight Monitoring Filter) Weight (g)	WMF (Filter#88) (Weight Monitoring Filter) Weight (g)	#152 Filter Weight (g) - Before Sampling	#152 Filter Weight (g) - After Sampling

<b>Average Particulate Concentration (mg/kg)</b>	<b>0.11 mg/kg</b>
<b>Average Particulate Concentration (µg/L)</b>	<b>0.0089 µg/Liter</b>

## Sampling Summary

The hydrogen sampling is performed on November 12, 2014 at CSU LA Hydrogen fueling Station with the sampling parameters listed in Table III, the sampling procedures for particulate and gaseous sample in Table IV & V, respectively.

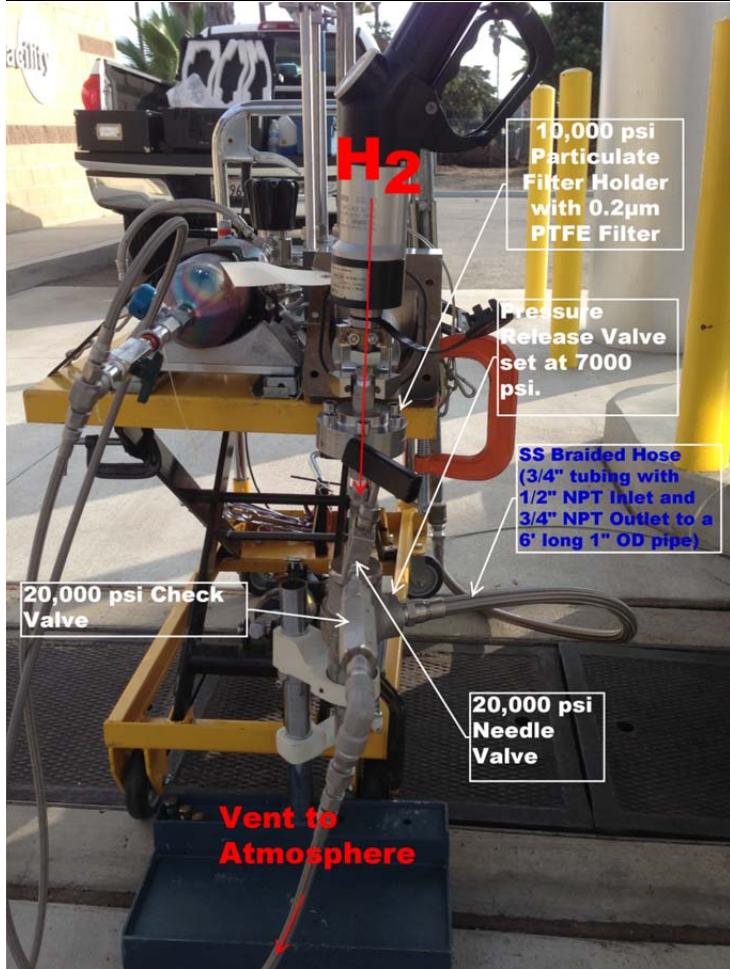

The particulate sampling by ASTM D7650-10 is implemented, in which the particulate sampling assembly (PSA) with a pre-weighed 0.2 $\mu\text{m}$  PTFE filter is employed. A total of approximate 2 kg of hydrogen from the H70 nozzle passes through the 0.2 $\mu\text{m}$  Teflon filter of PSA without either regulator or orifice in between. The Teflon filter shows no pinhole damage under microscope. The particulate concentrations and size measurements follow ASTM D7651-10 and D7634-10, respectively.

The gaseous sampling by ASTM D7606 is to regulate the hydrogen fuel from the H70 fueling nozzle to 1000 psi before flowing approximate 1 kg hydrogen fuel though a 1-Liter 1800 psi pressure proof sample container to obtain representative gaseous sample. Three gaseous hydrogen samples are collected from each nozzle using the procedures shown in the following section - Gaseous Sampling Procedure – ASTM D7606.

**Table III Particulate and Gaseous Sampling Parameters**

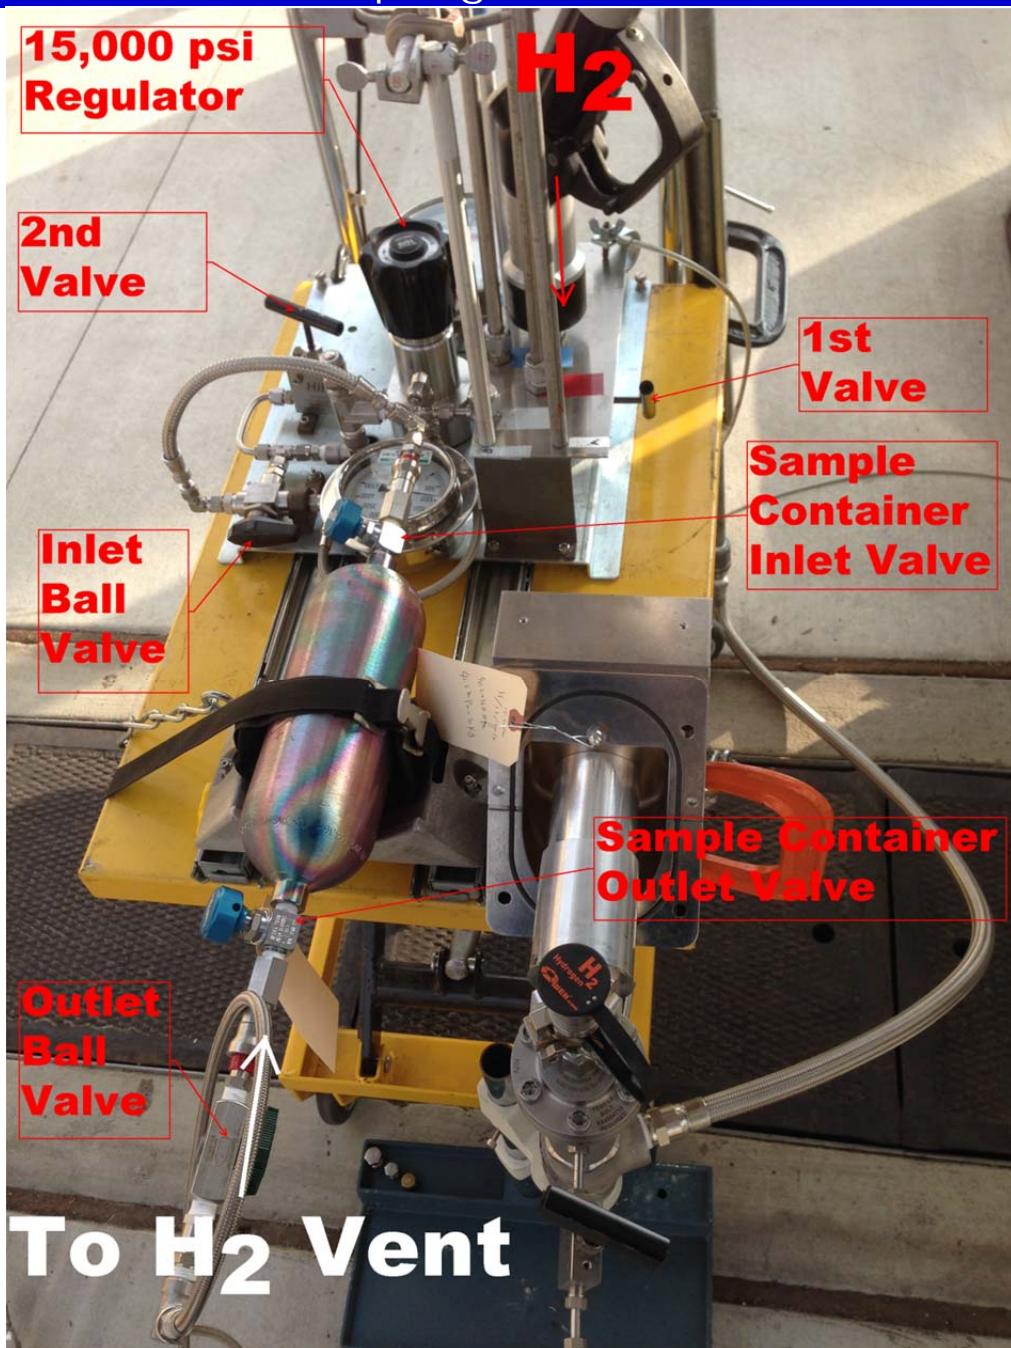

Event	Sampling Time	Duration (second)	Hydrogen Sampled (kg)	Flow Rate (g/second)	Hydrogen Inlet Pressure (psi)
Particulate Sampling at H70 Nozzle	11/12/2014 15:20	30	2	67	5000
1st Gaseous Sampling at H70 Nozzle	11/12/2014 15:34	67	1	15	10000
2nd Gaseous Sampling at H70 Nozzle	11/12/2014 15:38	55	1	18	10000
3rd Gaseous Sampling at H70 Nozzle	11/12/2014 15:51	65	1	15	10000

Table IV Particulate Sampling Procedure – ASTM D7650-10

1. **ALWAYS GROUND THE SAMPLING SETUP FIRST.**
  2. In Lab, a 47mm OD pre-weighed 0.2 Teflon filter is installed into a 10,000 psi pressure proof filter holder of a particulate sampling assembly (PSA) inside a glove box.
  3. Before particulate sampling, the particulate sampling assembly (PSA) is secured physically as shown left; the fueling nozzle is then attached to the PSA.
  4. Make sure the hydrogen to be sampled passes through the cooling unit.
  5. Open the needle valve to allow approximate 2kg of hydrogen flow through. The nozzle is then removed and the needle valve closed.
- Transport the particulate filter to Smart Chemistry for particulate concentration (ASTM D7651-10) and particulate size measurements (ASTM D7634-10).

Table V Gaseous Sampling Procedure – ASTM D7606-11

1. Assemble the gaseous sampling as above.
2. Attach the station suspensor nozzle to the receptacle. With the 1<sup>st</sup> valve closed and hydrogen fueling started by station personnel, use a hand held hydrogen detector to check for hydrogen leaks around the connections from J2799 nozzle to receptacle and receptacle to 1<sup>st</sup> valve. If no leak and 2<sup>nd</sup> valve closed, open the 1<sup>st</sup> valve and read the hydrogen pressure from 20,000 psi inlet gauge.
3. Regulate the **pressure of hydrogen fuel at 1000 PSI**. Check the hydrogen leak along hydrogen pass way from the 1<sup>st</sup> valve to the 2<sup>nd</sup> valve. If no leak is found, open all the valves downwards from 2<sup>nd</sup> valve, except the outlet ball valve after sample container outlet valve. Check for leak from 2<sup>nd</sup> valve to the outlet ball valve, especially sample container.
4. Let approximate 1 kg hydrogen fuel in pulses flowing through the sample container by opening the outlet ball valve, record the time duration and inlet pressure. Close in sequence the sample container outlet, inlet valves and the 2<sup>nd</sup> valve, while the hydrogen fueling is ongoing. After sampling of a sample container, the high hydrogen pressure in the inlet end to the sample container must be released through the inlet ball valve before a new sample container attached to the inlet end quick connection.

## Analytical Data for Non-Hydrogen Gaseous Constituents

The analytical data is tabulated for each non-hydrogen gaseous constituent in SAE J2719. The analytical data includes calibration standards, detection limit study, sample analysis, spike, or duplicate.

<b>Non-Hydrogen Gaseous Constituents</b>	
1.	Water
2.	Total Hydrocarbons
2.1	Methane
2.2	Non-Methane Hydrocarbons
3.	Oxygen
4.	Helium
5.	Nitrogen
6.	Argon
7.	Carbon Dioxide
8.	Carbon Monoxide
9.	Sulfur
9.1	H <sub>2</sub> S, COS, CH <sub>3</sub> SH, CH <sub>3</sub> CH <sub>2</sub> SH, CH <sub>3</sub> SCH <sub>3</sub> , CS <sub>2</sub> , (CH <sub>3</sub> ) <sub>2</sub> HCSH, (CH <sub>3</sub> ) <sub>3</sub> CSH, CH <sub>3</sub> (CH <sub>2</sub> ) <sub>2</sub> HCSH, CH <sub>3</sub> (CH <sub>2</sub> ) <sub>3</sub> HCSH and Tetrahydrothiophene.
9.2	Total Sulfurs – The sum of the concentrations of H <sub>2</sub> S, COS, CH <sub>3</sub> SH, CH <sub>3</sub> CH <sub>2</sub> SH, , CH <sub>3</sub> SCH <sub>3</sub> , CS <sub>2</sub> , (CH <sub>3</sub> ) <sub>2</sub> HCSH, (CH <sub>3</sub> ) <sub>3</sub> CSH, CH <sub>3</sub> (CH <sub>2</sub> ) <sub>2</sub> HCSH, CH <sub>3</sub> (CH <sub>2</sub> ) <sub>3</sub> HCSH and Tetrahydrothiophene.
10.	Formaldehyde
11.	Formic Acid
12.	Ammonia
13.	Total Organic Halogenates
13.1	Chlorine
13.2	Hydrogen Chloride
13.3	Hydrogen Bromide
13.4	Organic Halides (32 compounds in red and bold listed in "Non-Methane Hydrocarbons")

NOTES:

U - Analytes not detected at, or above the stated detection limit.

0 - A result of zero represents an undetected result at the MQL reported and does not imply an actual value.

PPBV - Parts per billion volume.

MQL - Method quantitation limit.

Surrogate results are in units of percent recovery with control limits: 65 to 135%.

The compounds in red and bold are organic halides.

Tentatively Identified Compound Estimated Concentration (PPBV)

Total Hydrocarbon (PPMV) **1.800**

14CSU007.xlsm

Total Hydrocarbon (C1 Basis, PPMV) **0.005**
